

This dictionary file is for dataset NCT00326898-D7-Dataset.csv.

Note #1: Data can be used to approximate published study findings, but exact reproduction of previous manuscripts may not be possible in some cases (e.g., when data must be modified for de-identification purposes or have undergone further data cleaning).

Note #2: Site of recurrence variable (“recursite”) in D1 and D3 was updated in D5 (for PMID 30130544) which provided extra information about multiple recurrence sites if there were any. Text data used in generating variable “others” in D5 was further recoded to provide detailed information about recurrence sites and they are stored in variables with prefix “other_” in D7. This recoding is compliant with the HIPAA Privacy Rule and provide protections for personal health information. Datasets D5 and D7 together provide complete information on site of recurrence.

Note #3: COD data is consistent with survival information presented in D5.

Note #4: Unless otherwise indicated, “999” indicates missing values.
